| ILPQC          | Discussed highlights from the ILPQC face-to-face meeting  
Morris hospital was unable to attend the meeting but were provided the MNO binders by APC  
Feedback included a desire to have more time spent on how to utilize the toolkit  
Concerns regarding the low volume of patients for this project, highlighted need to focus on pieces of the project not the volume |
| RQC Project    | Group reminded that this project was voted on being the network quality project.  
Discussion ensued as to identifying which piece to work on as our focus.  
All hospitals reported that they are not using a validated maternal screening tool on admission and a variety of but most hospitals using the Finnegan scoring system for neonates  
Each hospital is to discuss the options of tools with their Perinatal Leaders  
Susan Fulara from ABMC stated that she wanted to first survey her staff regarding bias and caring for the perinatal substance user  
The group decided that the APC would distribute the survey through survey monkey to get a network result and also have the hospital specific data available.  
Once the information is achieved will determine education needs of the network |
| IDPH Quality updates | Meeting to occur the following week                                                                                                                                                                           |
